

MULTI-VENDOR MARKETPLACE APP

Abstract

The Multi-Vendor Marketplace App is a platform where multiple vendors can register, add products, and sell them to customers. Customers can browse products from different vendors in one place.

Introduction

This project allows vendors to manage products and customers to browse them. Built using Flutter and Firebase.

Objectives

To create multi-vendor platform, manage products, and enable real-time updates.

Technologies Used

Flutter, Firebase, Firestore, Firebase Authentication, Firebase Storage.

System Architecture

Vendor Module: add products. Customer Module: view products. Admin Module: monitor system.

Features

Login system, product upload, real-time updates, image support, cross-platform app.

Working Process

Vendor adds product -> stored in Firebase -> customers view updated products instantly.

Advantages

Easy use, multi-vendor support, real-time updates, scalable system.

Limitations

Needs internet, Firebase dependency, basic UI.

Future Enhancements

Payment system, order tracking, chat system, reviews.

Conclusion

The project demonstrates a basic multi-vendor marketplace system using Flutter and Firebase.
